

George L. K. Morris

Recycled Robot Activity

Duration: 45 minutes

Ages: 5 - 12 years old

Materials:

- Recyclable materials and found objects
- Glue
- Tape
- Markers
- Scissors

Instructions:

1. Go around your house and collect recyclables and other items that can be used to create your robot. Feel free to leave the items whole or cut them smaller using the scissors.
2. Start by building the body and head. Then add other elements such as arms, eyes, mouth, and any accessories -- even an antenna! Use tape or glue to secure them together.
3. Find legs that will support the body of your robot. Cups work well.
4. If you need any inspiration or help, check out this video online:
